Payments Ops Review & Migration Assessment — Q3 2026

25 September 2026

§1 Reliability summary

See the transactions, mandates, gateway health and incidents tables for the numbers. Arvanta had three major outages in 12 months, including the 4-hour outage on 14 June 2026.

Disputes (chargebacks) run at about **5,000 a month** across all volume, so about **2,000 a month** on a 40% slice.

§3 Coverage gaps

Brevis does not support eNACH for two small banks, about **2% of our mandates**. These mandates must stay on Arvanta.

§4 Architecture

- Our payment routing layer can split traffic **by issuing bank and by payment method**, so we can keep specific banks on one gateway.
- Brevis provides a **real-time settlement and reconciliation API**; Arvanta provides daily settlement files.

§5 Migration estimate

Moving traffic to Brevis needs about **6 weeks with 4 engineers** (integration, certification, testing, phased ramp-up). Estimated one-time cost: **₹40 lakh**. Only **3 payments engineers** are free from November 2026, so the plan is likely to take about **8 weeks**.

Appendix — Vendor claims (unverified)

Brevis's sales deck (20 August 2026) states that migration can be completed "**in under 4 weeks**". This has not been validated by our team.

Legion Capital, Arvanta Payments, Brevis Pay, Sentrix Risk, Vireo Finance, Coral Bank and Tamra Bank are fictional.
